

Data Flow Diagrams and User Stories

Project: Automated Network Request Management (ServiceNow)

1. High-Level Data Flow Diagram (Level 0)

2. Data Flow Description

1. Employee opens the Service Catalog and selects the Network Access/Change Request item.
2. Employee fills in the required variables (Request Type — VPN Access, Firewall Rule, New Connectivity, or Guest Access — Business Justification, Device/System, Network Segment, Required By Date) and submits.
3. ServiceNow creates a Request (sc_request) and a linked Requested Item (sc_req_item) holding the submitted data.
4. The Approval Flow triggers, creating an Approval record (sysapproval_approver) assigned to the employee's Manager.
5. Manager reviews the request (via My Approvals) and approves or rejects it.
6. On Approval: the Requested Item's state updates, a Catalog Task is created and assigned to the Network/IT Support team, and the employee is notified by email.
7. On Rejection: the Requested Item's state updates and the employee is notified with the rejection reason.
8. If a request cannot be fulfilled (e.g., capacity constraint or security policy conflict, state set to On Hold), a Business Rule automatically creates an Incident assigned to Network Support for follow-up.

3. User Stories

ID	User Story	Priority
US-01	As an employee, I want to submit a network access/change request through a simple form, so that I don't have to email IT manually.	High
US-02	As an employee, I want to see the status of my request at any time, so that I know when it will be fulfilled.	High
US-03	As a manager, I want to receive network requests from my team in one place (My Approvals), so that I can review and decide efficiently.	High
US-04	As a manager, I want to see the business justification before approving, so that I can make an informed decision.	Medium
US-05	As a member of the IT/Network team, I want approved requests to automatically appear as tasks, so that I can plan and track fulfillment work.	High
US-06	As a member of the IT/Network team, I want an incident automatically raised when a request can't be fulfilled due to capacity or security policy conflict, so that the network team can be alerted without manual tracking.	Medium
US-07	As an employee, I want to receive an email when my request is approved or rejected, so that I don't have to keep checking manually.	Medium
