

UAT Report

Project: Automated Network Request Management (ServiceNow)

1. Report Summary

Total Scenarios	7
Passed	7
Failed	0
Overall Result	Accepted

2. Detailed Results

ID	Scenario	Tested By (Persona)	Result
UAT-01	Submit a network access/change request	Employee (impersonated)	Pass
UAT-02	Track request status	Employee (impersonated)	Pass
UAT-03	Receive approval task	Manager (impersonated)	Pass
UAT-04	Approve a request	Manager (impersonated)	Pass
UAT-05	Reject a request	Manager (impersonated)	Pass
UAT-06	Capacity/security conflict handling	System (Business Rule)	Pass
UAT-07	Fulfillment task visibility	IT/Network Team	Pass

3. Defects Logged

No critical or major defects were found during UAT. One earlier configuration issue — a hardcoded value inside the Flow's approval condition — was identified and corrected prior to formal UAT execution.

4. Observations

End-to-end approval routing, notification, and fulfillment task creation performed as expected across all tested scenarios. The capacity/security-conflict-to-Incident escalation worked correctly and required no manual intervention.

5. Conclusion & Sign-off

Based on the results above, the Network Request Management solution meets its defined functional requirements and is accepted for demonstration/submission.
